

What Am I?

Sometimes it is not possible for us to accurately identify an object, either because it is incomplete or because we cannot find any parallels for it. In such cases, it is better for us to simply say 'unidentified object', rather than guess what it is.

Here is a selection of 'unidentified objects' from the PAS database that have got us stumped. What do you think they could be? Remember to support your identification with evidence – that is the reason why you think the object is what it is.

If you enter the number under each image into the PAS database, you can see whether your answers match what our Finds Liaison Officers thought when they recorded the objects!
